

A Connected Vision

Spanning 19,700 sqm, The Red Residence is thoughtfully crafted to merge architectural harmony with natural tranquility.

At first glance, the compound unfolds as a seamless composition — a series of elegant buildings that appear connected in rhythm and design. Yet behind this unity lies a carefully planned layout: each building enjoys its own private entrance, leading to an exclusive collection of serviced apartments, ensuring privacy and individuality.

The masterplan celebrates open space and balance. Lush landscaped gardens, reflective water features, and swimming pools flow through the heart of the compound, offering residents calming views and a constant connection to nature. Every pathway, terrace, and green pocket has been designed to encourage ease, openness, and serenity — transforming the landscape into a living part of everyday life.

Beneath it all, a fully connected underground parking links every building, ensuring effortless access while preserving the uninterrupted beauty of the scenery above.
