

Master plan

As you step through the beautiful walkways, the landscape unfurls before you, a sublime %80 of the entire 111 feddans expanse dedicated to gardens, greenery, water features and open spaces. The sun-dappled meadows beckon, offering a place to unwind and connect with the Earth's rhythm.

Every vantage point reveals a breathtaking vista, overlooking the serene, azure winding path of the 1.8 kilometers long crystalline water lagoon. This is a place where the wonders of the natural world coexist seamlessly with the wonders of architectural achievement.

A canvas of spectacular architecture paints the horizon, an awe-inspiring testament to human creativity. The structures are a harmonious blend of modern innovation and timeless aesthetics, their lines and angles echoing the surrounding beauty. Towering windows frame nature's artwork, allowing every resident to revel in the ever-changing kaleidoscope of colors, as the sun rises and sets over this masterpiece of a residence.

Designed by an international consultant to provide the ultimate living experience, the zones within the project are set to create smaller, fully integrated clusters within the bigger concept of the project. Impeccably planned vehicular roads that scarcely intersect with pedestrian walkways provide perpetual smooth traffic, as well as seclude the living and leisure quarters from the street clamor, providing both safety beauty and peace.
